

TEHREEM SHEHZADI

Business Analyst | Product Analytics & Management

+92 302 809 4134 | tehreemnaeemsultan@gmail.com | linkedin.com/in/tehreem-shehzadi-b5b13b360 | Islamabad, Pakistan

PROFESSIONAL SUMMARY

Product-minded Business Analyst working inside the product team of a SaaS platform, owning PRDs, sprint planning, KPI tracking and funnel analysis. Turns user behavior and product data into clear recommendations for leadership, runs competitive and user research to shape the roadmap, and coordinates delivery across design, engineering and QA in an Agile/Scrum setup. Computer Engineering graduate with hands-on AI product experience (LLM apps, computer vision) and a strong interest in AI-powered consumer products. Proficient in SQL, advanced spreadsheets, Firebase, Figma, Jira and automation platforms (n8n, Zapier, Make.com).

CORE COMPETENCIES

- Product Requirements (PRDs) & Release Notes
- Funnel & User Behavior Analysis
- Roadmap Execution & Sprint Planning (Agile/Scrum)
- Cross-Functional Delivery (Design, Eng, QA)
- Product KPIs & Success Metrics
- Experimentation & A/B Test Analysis
- Competitive, Market & User Research
- Stakeholder Reporting & Insights

TECHNICAL SKILLS

Product & PM Tools:	Jira, Confluence, Notion, Figma (wireframes/prototypes/mockups), Microsoft Project, G Suite
Analytics & Data:	MySQL (joins, window functions, CTEs, funnel and cohort queries), Firebase, Advanced Google Sheets, Excel (pivot tables, dashboards)
Automation:	n8n, Zapier, Make.com, Pabbly AI agents, scripted data pipelines, multi-system workflows
CRM & Support:	Salesforce objects, fields, reports; Helpscout; CRM data management and reporting
AI / ML / NLP:	LangChain, HuggingFace Transformers, TensorFlow, OpenCV, Prompt Engineering
Programming:	Python (Pandas, NumPy, Matplotlib), C/C++, MATLAB (basic)
QA & Other Tools:	BugBug.io, Git, Blynk Cloud

PROFESSIONAL EXPERIENCE

Business Analyst

Aug 2025 - Present

D4 Interactive (ContentStudio) | Islamabad, Pakistan

- Help execute the product roadmap for a SaaS platform: author PRDs, user stories and release documentation, and lead sprint planning within Agile/Scrum, prioritizing the backlog and coordinating delivery across development, QA and R&D.
- Define and track product KPIs and success metrics with definitions that hold up under executive scrutiny, maintaining dashboards and weekly business reviews that explain the story behind metric movement.
- Analyze funnel, user behavior and product usage data with SQL and advanced Sheets to find drop-off points, optimization opportunities and growth levers, delivering recommendations with quantified impact.
- Monitor user feedback and support conversations (Helpscout) and turn recurring pain points into prioritized, well-scoped feature requirements.
- Conduct competitive and market research on feature benchmarks, pricing and market gaps, partnering with product and GTM stakeholders to inform roadmap decisions.
- Create wireframes, prototypes and mockups in Figma to communicate user flows and UI requirements to design and engineering.
- Validate features and data flows before release with QA using BugBug.io, building data validation into every deliverable so reported numbers reconcile across systems.
- Build automation with n8n, Zapier and Make.com (AI agents, multi-system workflows, API-connected pipelines) that removes manual reporting and operational work for the team.
- Maintain product documentation, including API references, workflow manuals and Knowledge Base articles, to keep cross-functional teams aligned.

Project Intern, Embedded Systems

June - Aug 2024

Microwave Components & Devices Research Lab, COMSATS | Islamabad, Pakistan

- Designed and developed an intelligent AC/DC power load for efficient testing and analysis, integrating ESP32 microcontroller with hardware for smart control and real-time data monitoring.
- Collaborated with the research team to optimize system performance, document testing procedures, and present findings to supervisors, building strong analytical and stakeholder communication skills.

- Led a 5-day training program on AI, IoT, and Data Science for 50+ participants, designing interactive workshops and adapting content for diverse technical backgrounds.
- Demonstrated strong communication and facilitation skills by compressing complex technical concepts into clear, accessible narratives for non-technical audiences.

KEY PROJECTS

LLM-Powered Research Paper Summarizer | Python, LangChain, Chroma DB, Streamlit

- Built and shipped an AI-powered assistant that summarizes academic papers using LLMs with semantic chunking, embeddings, and question-answering over PDFs. Deployed as a Streamlit web interface.

CNN-Based Plant Disease Detection | TensorFlow, Raspberry Pi, EfficientNet-B0, DenseNet121

- Developed a real-time plant disease detection system using CNN models with transfer learning, deployed via TensorFlow Lite on Raspberry Pi for edge inference.

Real-Time Face Mask Detection | OpenCV, CNN, Blynk IoT

- Built a real-time face mask detector achieving 93% accuracy for healthcare settings, integrating Blynk for wireless IoT control and monitoring.

EDUCATION

B.S. in Computer Engineering | CGPA: 3.13 / 4.0

Sep 2021 – July 2025

COMSATS University Islamabad

Relevant coursework: Artificial Intelligence, Neural Networks, Database Systems, Embedded Systems

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Application of Deep Learning in Engineering, Workshop, COMSATS University (0.5 CPD credits, Nov 2024)
- Python Development Essentials, Udemy (2025)
- AI Essentials, Coursera (2025)
- ROBIAN All Pakistan Robotics Contest: Line Following Robot with automation & wireless control (2022)
